	Lea	arning Overview		Learning Overview		Learning Overview		Learning Overview		Learning Overview		Learning Overview
Year 7	Re     Re     G	asoning with number Ordering numbers including integers and decimals, using inequalities and rounding to nearest 10, 100, 1000, decimal places and significant figures. Using these skills in a variety of situations. Idition and Subtraction With negatives and in a variety of contexts including bank statements, time, frequency trees and perimeter. ultiplication and Division With integers, by 10, 100, 1000, with decimals and negative numbers, using all of these skills in problems.	•	Application of Multiplication and Division Including with powers and roots, using these to find highest common factor and lowest common multiples. This will also be applied to estimate calculations, finding the mean and other applications. Geometric Multiplication and Division Finding areas of different shapes including rectangles, parallelograms, triangles and compound shapes extending to other shapes where possible.	•	Understanding Fractions Working with fractions to express one quantity as a fraction of another and manipulate fractions to find equivalent fractions, fractions of amounts and increases and decreases. Fractional Operations Performing calculations with fractions including addition and subtraction, multiplication and division. Shape Properties Using shape properties in different problems including with coordinates.	•	Working with angles Including learning notation used with angles and using angles rules to find missing angles and solve problems. Percentages Working with percentages to convert between fractions, decimals and percentages. Using percentages to find quantities including percentage increase and decrease.	•	Representing Data Using different charts and diagrams to represent data including bar and line charts, pie charts and extending into probability and finding all options for events.	•	Algebraic Expressions Working with and forming expressions, substituting values into expressions and expanding single brackets. Algebraic Equations Solving one and two step equations extending to solving with brackets.
Year 8	Alg     A	gebraic Manipulations Extending substitution and expanding brackets into factorising into single brackets and expanding double brackets. quences and order Extending solving equations to rearranging simple formulae, Looking at how these can be applied to sequences and finding the nth term of sequences.	•	<ul> <li>Angle Reasoning</li> <li>Create scale drawings and extending angle</li> <li>knowledge into bearings and parallel lines</li> <li>2D Shape Application</li> <li>Extending students'</li> <li>knowledge of area of trapeziums, circles and then to find the surface area.</li> <li>Ratio</li> <li>Dividing an amount into a given ratio. Working with ratio information given to find missing parts.</li> </ul>	•	Ratio Continuation from previous half term. Compound units Working with speed, distance and time to solve problems and calculate units, then extending to creating distance time graphs. Working with density mass and volume to solve problems.	•	Direct and Inverse Proportion Using direct proportion to solve problems with recipes and best buy. Using graphs to convert measurements and currency. Reasoning in 3D and understanding Capacity Creating nets and drawing plans and elevations of 3D solids. Extending to finding the volume of prisms and cylinders.	•	Working with Data Calculating and using the appropriate average for different situations. Extending to finding averages from frequency tables. Representing data on scatter graphs and frequency polygons.	•	Working in the Cartesian plane Using coordinates in problems and then extending to draw linear graphs. Constructions and Loci Use compasses and protractors to perform constructions including perpendicular bisector, angle bisector and to construct triangles. Algebra Extending solving equations to solve simultaneous equations both algebraically and graphically.

Year 10	•	data. Drawing scatter diagrams. Number and Sequences Finding the nth term of linear and quadratic sequences and looking at special sequences such as square numbers. Volume and Surface Area of Prisms Finding volumes of prisms including cylinders. Linear Equations Solving linear equations including with brackets and where there are unknowns on both sides. Percentages and compound Measures Convert between fractions, decimals and percentages including with percentage increase and decrease and reverse percentages. Writing one number as a percentage of another and looking at	<u></u> ・ 土 ・	Representation and Interpretation Looking at how to take samples then moving to pie charts scatter diagram and finding averages from grouped data. Constructions and Loci Constructing triangles, bisectors and loci will be covered extending to problems involving these. Combined Events Working out the probability of two outcomes or events occurring at the same time. Using tree diagrams to work out the probability of	•	Curved Shapes and Pyramids Finding the area and perimeter of sectors, then finding volumes of pyramids cones and spheres. Number and Sequences Looking for patterns in numbers finding the nth term of a linear sequence and then looking at special sequences like the Fibonacci sequence. Right Angled Triangles Using Pythagoras' theorem to find longest and shorter sides, then applying to different situations. Finding missing sides and angles using trigonometry, then	E • ±	Congruence and Similarity Demonstrating congruency and then using similarity to find missing sides. Combined Events Working out probability of two or more events occurring. Looking at how we can use two way tables and venn diagrams with probability. Using tree diagrams to find probabilities in combined events. Graphs Drawing distance –time and velocity-time graphs and using these to solve	- -	Powers and Standard form Write numbers as powers of another. Use laws of indices to calculate with numbers in index form. Writing very large or small numbers in standard form and calculating with these. Simultaneous Equations and Linear Inequalities Solve simultaneous equations using the elimination and substitution methods. Using simultaneous equations to solve problems. Solving inequalities.	Е • !	Non-linear Graphs Drawing distance-time graphs, plotting quadratic graphs, cubic and reciprocal graphs. Factorising quadratics and then extending to solving quadratics understanding how this relates to the quadratic graph. Vector Geometry Add and subtract vectors and use them to solve geometric problems.
	•	density, mass and volume. Percentages and Variation Simple interest and compound interest will be used to solve problems extending to reverse percentages. Direct proportion and inverse proportion problems will be covered. Counting Accuracy, powers and surds Converting recurring decimals to fractions, estimating powers and roots and calculations with negative and fractional indices. Calculations with surds including simplifying, multiplying and rationalising	•	or rules to work these out and then extending o conditional probability. Properties of Circles Using circle theorems to find missing angles and solve problems.	•	bearings. Variation Solving direct and inverse proportion problems algebraically. Triangles Using trigonometry to find missing sides and angles in non-right angled triangles. Using the sine rule to find the area of a triangle.		estimate the rate of change. Finding the equation of a tangent to a circle. Looking at non-linear graphs and how transformations effect the graphs.		Simplifying and calculating with algebraic fractions and then extending to solve equations. Changing the subject of a formula where the subject appears more than once. Introducing and using function notation and then extending to using this to find composite functions. Use iterations to solve equations.		

			1								,
		the denominator. Finding error intervals for rounding									
		numbers and solving									
		problems involving these.									
	•	Quadratic Equations									
		Plotting quadratic graphs,									
		then moving to solve									
		quadratic equations using									
		factorising, the quadratic									
		formula and completing the									
		square. Linking the solutions of guadratics to the specific									
		points on their graph.									
		Solving simultaneous									
		equations with a quadratic									
		using the graph and									
		algebraically. Solving									
		quadratic inequalities.									
	•	Sampling and more complex									
		Diagrams									
		Understand sampling,									
		creating frequency polygons,									
		cumulative frequency									
		diagrams, box plots and									
		histograms.

					r		r		1		1	
Year 12	• • • •	Surds Using and manipulating surds and working with indices. Problem Solving Solving problems, writing mathematically and proof. Quadratic equations Drawing and sketching quadratics, solving quadratic equations using all methods. Trigonometry Using trigonometry for right angled triangles and using these to derive the exact values. Using trigonometric identities to solve trig equations. Use trigonometry with non-right-angled triangles. Equations and inequalities Solving simultaneous equations and inequalities. Graphs Using function notation and recognise and sketch graphs and sketch graphs after the effects of a transformation. Matrices and Transformations Performing calculations with matrices to represent	•	Polynomials Add and subtract polynomials, multiply by expanding brackets and understand key features of a graph of a polynomial. Divide a polynomial and use the factor theorem to factorise the polynomial and find missing coefficients. Coordinate Geometry Find the midpoint and distance between two points, find the gradient and find the equation of a line including of parallel and perpendicular lines. Find the intersection between two lines. Find the equation of a circle and find the centre and radius of a circle, using this to then find the intersection between a curve and a line. Differentiation Finding the gradient of a tangent from limits, then using standard results. Extending differentiation to find the equation of tangents and normal. Using differentiation to decide if a function is increasing or decreasing and using higher order derivatives to find the	• • •	Binomial expansion Use the binomial expansion to expand to a positive integer power. Use the beginning of an expansion to find approximations. Integrate functions and understand it as the reverse of differentiation. Evaluate indefinite integrals and use these to find the area under a curve. Exponentials and Logarithms Understand exponential functions, sketch their graphs and use to model real life situations. Understand logarithms as the inverse of exponentials and use the laws of logarithms to solve equations. Forces and Motion Work with vectors and Newton's laws of motion to solve problems involving forces in equilibrium and to find resultant forces. Friction Understand how friction can be modelled and use this in force diagrams along with Newton's laws of motion to solve problems.	• • • •	Vectors Work with vectors to solve geometric problems. Data Collection Understand the problem solving cycle. Understand different sampling methods. Kinematics Use the language of motion, draw and interpret distance- time and speed-time graphs, using these to solve problems. Use the equations of motion. Data Processing representation and interpretation Present different types of data, process and interpret this data including finding the variance and standard deviation. Impulse and Momentum Find the loss of kinetic energy during a direct impact, using the conservation of energy and Newton's law of impact. Circular Motion Understand the language and notation with circular motion. Hooke's Law Apply Hooke's Law to strings	• • •	Forces and Newton's laws of Motion Create force diagrams, understand and use Newton's laws of motion. Solve problems involving pulleys and connected objects. Probability Finding the probability of events and using these in a range of situations to solve problems. Binomial distribution Understand when the binomial distribution can be used and use it to calculate probabilities of problems. Dimensional analysis of forces Find the dimensions of a quantity in terms of T, L and M. Use dimensions of a quantity to determine its units. Game theory Understand, interpret and construct pay off matrices. Find play safe strategies Identify and make use of dominated strategies. Find optimal mixed strategies for a game including use of graphical methods.	• • •	Variable acceleration Using differentiation to find the velocity and displacement of an object with variable acceleration. Hypothesis Testing Perform hypothesis testing understanding key terms and when to use a two tailed test. Centre of mass Calculate the volume generated by rotating a plane region about an axis. Binary Operations Understand and use binary operations. Construct a Cayley table for a given set and binary operation. Motion under a variable force
		effects of a transformation. Matrices and Transformations Performing calculations with	•	Extending differentiation to find the equation of tangents and normal. Using differentiation to decide if a function is increasing or decreasing and using higher order derivatives to find the minimum and maximum of a function.	•	find resultant forces. Friction Understand how friction can be modelled and use this in force diagrams along with		Newton's law of impact. Circular Motion Understand the language and notation with circular motion.		construct pay off matrices. Find play safe strategies Identify and make use of dominated strategies. Find optimal mixed strategies for		

	•	coordinates. Sketch curves in the polar form. Intro to complex numbers Understand complex numbers and solve quadratic equations where the roots are complex. Calculate with complex numbers (adding, subtracting multiplying and dividing) Roots of Polynomials Know the relationship between roots and coefficients of quadratics, cubics and quartic equations. Solve polynomials with complex roots. Rational functions and further algebra Sketch graphs of rational functions. Solve inequalities of the same form.	<ul> <li>Vectors and 3D space Find the angle between two vectors, find the vector equation of a line and find the distances from lines.</li> <li>Complex numbers and geometry Find the modulus and argument of a complex number. Calculate with complex numbers in the modulus-argument form. Represent loci of complex numbers.</li> <li>Sequences and series Find the sum of series using standard formulae. Use the method of differences to find sums. Use proof by induction. Use Maclaurin series expansion for approximations.</li> </ul>	Solve network optimisation problems using spanning trees with Primm's and Kruskal's algorithms. Solve route inspection problems and the travelling salesperson problems.	Construct, represent and interpret a precedence network using activity-on- node. Determine earliest start times and latest finish times. • Network flows Interpret flow problems represented by a network of directed nodes. Use and interpret maximum flow- minimum-cut theorem.
